### **Trainee Facade Technician**

#### **The Company**

Hays have been exclusively retained by one of the regions leading specialist architectural glazing contractors to source an experienced Facade Technician to join their established team on a permanent basis. They have been established for almost 20 years and continue to expand throughout the UK & Ireland on a variety of contracts including retail, commercial, educational and healthcare. Throughout the firms history they have built and developed their business by delivering quality bespoke solutions to their clients, which has developed into consistent repeat business on high profile projects. Due to growth & expansion the company have an immediate permanent requirement for a Facade Technician who specialises in curtain walling and glazing.

#### **The Role**

As a Trainee Facade Technician you will be tasked with developing a diverse range of detailed design drawings for some of the most architecturally sophisticated buildings in the commercial construction industry.

Reporting to the Technical Manager you will provide support to the Production and Project Management teams throughout the design, production and installation stages of each project.

Working in a busy team environment you will be involved with a range of separate projects at any one time. They will attend design team and site meetings with clients, architects and other subcontractors as and when the need arises. This will require an understanding for the part played in the overall project communication with the entire team and the ability to exceed expectation.

Day to day duties to include producing detail drawings, glass, flashing and bracket schedules, along with Bills of Materials.

#### **The Person**

The successful applicant will be proficient in AutoCAD design and ideally have a relevant 3<sup>rd</sup> level qualification in a construction related discipline. Experience of RIVET Architecture would be advantageous.

Experience with curtain walling, windows and doors, shop fronts, glazing systems, frameless bolt glass and roof glazing.

Schuco, Aluprof, Metal Technology Aluminium glazing systems experience would be advantageous.

Understanding of basic building physics including ventilation, solar gain control, thermal insulation, glare control, along with fire and smoke control.

Good awareness of the problems and constraints of the other major design disciplines such as Architectural, Structures, Services, Fire Engineering, Acoustics and Computer modelling.

On going training within the company will help develop these skills.

#### **The Opportunity**

This is an excellent opportunity to join one of the UK's leading glazing and facade companies, offering the chance to work on landmark and unique projects throughout the U.K & Ireland. In return you will be rewarded with a competitive annual salary and the opportunity for career progression in a local company that is going from strength to strength, with a strong reputation among the local and national main contractors.
